

Closed-Lost Analysis — 2026-06

8 deals Luis selected from the last 50 closed-lost that reached Proposal/Negotiation. Evidence reconstructed from HubSpot (deal records, logged emails, notes), Fireflies (22 recordings reviewed), and stage-history data. ~\$21.6k/mo in lost MRR across the 8.

Per-deal post-mortems below: [Apolo Shoes](#) · [Avanza](#) · [Aromacom](#) · [Flor de Aragua](#) · [Alimentos Kiri](#) · [Salomé Makeup](#) · [MAPLOCA](#) · [Maxipet](#)

The scoreboard

Deal	\$/mo	Proposal (yr + impl)	CRM label	What the evidence says
Apolo Shoes	3,500	\$42k + \$7k	Security	Directors never met us; credential trust gap; their "start small" ask ignored
Avanza	4,000	\$48k + \$6k	Timing	Price objection + agreed re-scope that never shipped
Aromacom	1,500	\$9.6k→\$18k + \$3.5k	No Response	Repriced 2x mid-deal; director (Yoli) never in a meeting; ghosted
Flor de Aragua	2,500	\$30k + \$5k	Budget	Full package proposed mid-ERP-migration against client's phased ask; junta said no in 5 days
Alimentos Kiri	5,000	~2x proposal v1	Competitor	Lost to ENIAC (VE local) after we doubled price during their parallel eval; no counter-move
Salomé Makeup	1,500	\$18k + \$4k	Timing	\$22k yr-1 ask to single-contact retail SMB; ICP question
MAPLOCA	1,500	\$18k + \$5k	Budget	Junta chose headcount over software ; time-saved ROI lost to cheap-labor math
Maxipet	2,500	\$8–40k→\$12k→\$30k	Budget	Price anchor moved 3x; 10 silent weeks; said revisit June — re-engage now

Finding 1 — Mid-deal repricing killed deals (the Tesote 2.0 transition cost)

In at least 3 deals the price roughly **doubled while the deal was in flight** (Kiri verbatim: "*prácticamente el doble de la primera propuesta*"; Aromacom \$9.6k→\$18k/yr; Maxipet's wandering anchor). The Q1 consultative repositioning + full-group scoping is a legitimate upmarket move — but applying it to deals that already had a cheaper number in hand converted near-signings into stalls. Aromacom had a **January signing path** that the re-pitch un-signed.

Decision for Luis: if the repricing was deliberate strategy, some of these are acceptable churn of the old segment — but Kiri was exactly the new-segment target (\$60k/yr full group) and was lost to a cheaper local provider. Grandfather in-flight deals at quoted price; new positioning starts with new pipeline.

Finding 2 — The decision happens in a room we're never in

In **6 of 8** deals the kill decision was made by a junta/directiva/socios who never attended a Tesote meeting (Apolo directors, MAPLOCA junta, Aromacom's Yoli, Flor de Aragua junta, Maxipet socia, Kiri's roadmap committee). We sell to operators; owners say no. The champion walks into that room with a PDF and our price — and without our answers to the two questions that recur there: *why not just hire someone* and *why would I give a SaaS my bank credentials*.

Fix: junta kit (1-pager: security architecture + SOC 2 trajectory, named references, ROI framed vs. headcount) + a rule that any deal >\$2k/mo gets a Luis/Roberto touch *before* the board date, not after the stall.

Finding 3 — The proposal email is where deals go to die

Pattern across all 8: proposal email sent → zero or near-zero logged activity → closed lost days-to-weeks later. No second proposal versions exist anywhere in the record (Avanza's was explicitly promised on the call and never logged). One-shot proposals at \$18–48k/yr.

Fix: post-proposal SLA — +48h call, +7d objection session, and a price objection *mandatorily* triggers a v2 (phased/starter) within 48h. Track "proposal versions per deal" as a metric; today it's 1.0.

Finding 4 — The real competitor is headcount (and one named software rival)

- **Headcount:** MAPLOCA explicit, Maxipet/Salomé implicit. In VE, \$1.5–2.5k/mo equals a finance clerk. Time-saved ROI (the STAR analysis) loses that math. The winning frame is what a hire *can't* do: real-time consolidated availability, data integrity, scale without fraud/error surface.
- **ENIAC** (Venezuelan, took Kiri): first named software loss in this set. Needs an intel file. SAP integration may be their wedge — ours is API-docs-DIY, theirs possibly done-for-you.
- **Security/credentials** is a recurring structural objection (Apolo fatal, Aromacom 2x docs). Advanced-permissions + consulta-only bank users exist as answers — they're arriving reactively, after hesitation, instead of in the proposal packet.

Immediate actions

1. **Maxipet re-engagement this month** — they said June; hook = the bank-commissions analysis from 02-10.
2. **ENIAC intel doc** + Kiri check-in ~Q3 (implementation-pain window).
3. **Starter tier** (core accounts, ~\$1–1.5k/mo, limited credentials) as the standard price-objection counter — three clients effectively asked for it (Apolo, Flor de Aragua, Avanza).
4. CRM hygiene: log WhatsApp outcomes as notes (the decisive 2–6 week endgame of every deal here is invisible); require detailed_loss_reason to name *who* decided and *against what alternative*.

Coverage caveats

Salomé is speculative (no recordings). Apolo/Avanza endgames ran on WhatsApp — unlogged; readings could change if Esteban/Nicolás have counter-evidence. Kiri 03-25 recording contains leaked internal Tesote conversation (recording left running) — **review and trim/restrict that Fireflies recording**.

Per-deal post-mortems

Apolo Shoes

\$3,500/mo · Lost 2026-06-04 · "Security" Proposal: \$42,000/yr + \$7,000 implementation (sent 2026-04-29) **CRM loss reason:** Security — "Directors are hesitant to provide the bank account credentials."

Timeline

Date	Touch	Source
04-16	Deal created; Esteban sends intake sheet to Rafael Mireles	HubSpot email
04-20	Discovery call, 62 min — Rafael + Rosaura Mireles, Carlos Melian + Esteban. Manual Excel/TXT downloads, ERP Profit , 12–15 users planned	Fireflies 01KPBGECJG54YY5MFMVTR9DJRT
04-29	Proposal email: \$42k/yr + \$7k impl, demo credentials	HubSpot email
04-29 → 06-04	No logged touches (36 days — presumably WhatsApp/phone)	gap
06-04	Closed lost: directors hesitant on bank credentials	CRM

What actually happened

- Champion (Rafael, treasury-level) was bought in; the **directors killed it** — and they were never in a Tesote meeting. Carlos's action item from 04-20 was "coordinar reuniones presenciales con los directores" — no evidence it happened.
- In discovery, Rafael himself proposed starting small: "*una automatización que comience con las cuentas principales para evaluar costos y beneficios.*" The proposal that went out 9 days later was the full \$42k+\$7k package.
- The credential objection is **structural** (Tesote's connection model requires bank credentials) and recurring across deals — see Aromacom (security docs sent twice). The advanced-permissions beta + consulta-only bank users are the existing ammo; neither was deployed here per the record.

Coverage

Solid through 04-29; the decisive 5 weeks (objection surfacing → close) are undocumented. The security framing comes only from the loss note.

Could-have-dones

1. Honor their own ask: a Phase-1 pilot on the main accounts (cheaper, fewer credentials, builds trust before asking for all of them).
 2. Director-facing security packet (SOC 2 trajectory, read-only architecture, consulta-only bank users) attached to the proposal — not produced reactively after hesitation.
 3. Get the directors in a room (or Luis/Roberto call) before the proposal, not after the stall.
-

Avanza

\$4,000/mo · Lost 2026-05-25 · "Timing" Proposal: \$48,000/yr + \$6,000 implementation (sent 2026-04-22) — 107 accounts, 11,131 tx/mo **CRM loss reason:** Timing — "restructuring internal processes, resume in a month"

Timeline

Date	Touch	Source
03-30	Deal created — Daniel Cival (dc@avanzacb.com), advised by Alibanca team (Daniela Guarata, J. Marín)	HubSpot
03-31	Demo, 39 min (Nicolás + Luisana). Strong engagement: access controls, Odoo integration, manual-ledger roadmap questions	Fireflies 01KMQTT34RPD5960ZQ369WF1XH
03-31	Intake sheet sent	HubSpot email
04-22	ROI & proposal call — only 16 minutes . \$6k + \$4k/mo. Daniel: price too high, asked to re-scope on active accounts only . Action items: Daniela to "sincerar" the account list, Nicolás to send adjusted proposal	Fireflies 01KPNQCMW069M6CREPT55NZE2Y
04-22	Proposal email (\$48k/yr + \$6k)	HubSpot email
04-22 → 05-25	No logged touches. No adjusted proposal on record	gap
05-25	Closed lost: "restructuring"	CRM

What actually happened

- The evidence contradicts the CRM label. On 04-22 the objection was **price**, with a concrete, agreed path forward (re-scope to active accounts). That second proposal never appears in any system. "Restructuring, resume in a month" arrived a month later as the exit line.
- A 16-minute call to land a \$54k year-one ask, with an advisor (Alibanca) in the room whose job is to scrutinize cost — the ROI walkthrough couldn't have landed.
- The buyer gave us the discount path themselves; we didn't take it (or took it on WhatsApp and lost the record).

Coverage

Solid through 04-22. The post-proposal month is dark — if the adjusted proposal went via WhatsApp, this reading changes; worth asking Nicolás.

Could-have-dones

1. Adjusted proposal within 48h of the 04-22 commitment — momentum dies in re-scope limbo.
 2. Don't compress the ROI conversation into 16 minutes when the ask is \$54k and there's a financial advisor in the room.
 3. "Resume in a month" was 04-22+30 ≈ late May — close date. A scheduled re-entry touch was the minimum; deal was binned instead.
-

Aromacom Group

\$1,500/mo · Lost 2026-04-28 · "No Response" Reached Negotiation 2026-02-13, then ghosted.

Timeline

Date	Touch	Source
11-27	Intro call — Yolibert Russo (gestion@), ~4 accounts, ~1,500 tx/mo	Fireflies 01KAEZ8HJPG0Z2KX8VN0H049G8
12-19	Proposal v1: \$9,600/yr + \$2,500 impl (10 users, 4 accounts). Plan: sign + start implementation in January	Fireflies 01KCS0KHNSV0SJMRQDB58470B
01-29	Tesote 2.0 consultative re-pitch (Roberto + Luis present). Re-discovery: full data levantamiento, operating-architecture redesign framing	Fireflies 01KFNBV623H204R143KN6GJPWP
02-04	Proposal v2: \$3,500 impl + \$1,500/mo (\$18k/yr) — 24 accounts. Jonathan to take it to la directiva (director Yoli). Security docs re-sent ("enviar nuevamente los documentos de seguridad"). Thursday follow-up planned	Fireflies 01KGFABBV7H5ZT5FWPWDSMQWY
02-13	Deal moved to Negotiation	CRM
02-13 → 04-28	Silence. Zero further meetings, zero emails logged	gap
04-28	Closed lost (bulk-cleanup day)	CRM

What actually happened

- "No response" is the outcome; the cause is upstream. The deal had a **January signing path at \$9.6k/yr** — then got pulled into the Tesote 2.0 re-pitch, scope grew 4→24 accounts, price ~2x'd, and the decision moved up to a **director (Yoli) who never attended a single meeting**.
- Security was a live concern twice (docs sent in December AND re-sent in February). Whatever happened in la directiva, we weren't there and our champion carried a doubled price and an unresolved trust question into it.
- CRM hygiene: **zero contacts and zero emails associated with this deal** — everything above had to be reconstructed from Fireflies.

Coverage

Strong meeting record (5 calls); total darkness after 02-04. The directiva discussion — where it died — is invisible by nature.

Could-have-dones

1. Close the January deal at v1 price; upsell the consultative layer after trust exists. Repricing an in-flight deal upward killed the momentum it had.
 2. Anything to reach Yoli: a director-facing one-pager, an exec call offer, references from named clients.
 3. A defined ghost protocol: after 2 silent weeks post-proposal, escalate channel (call → Luis touch → breakup email), don't just let it decay for 10 weeks.
-

Flor de Aragua

\$2,500/mo · Lost 2026-04-28 · "Budget/Pricing" Proposal: \$5,000 impl + \$2,500/mo (\$30k/yr), presented 2026-04-23
— lost 5 days later

Timeline

Date	Touch	Source
12-16	Intro, 43 min — Ernesto Brito (tesorería). Mid-migration Dynamic AX → Odoo	Fireflies 01KC4MA1FSN1TWXBY9B8KDBTJR
12-18	Demo credentials + meeting slots sent	HubSpot email
01-15	Call with Luis present — Juan Sequera (tech lead). Tesote 2.0 pitch; " <i>Flor de Aragua ya aprobó avanzar</i> "; junta to assign budget; possible in-person in Maracay	Fireflies 01KESTPJWGCHQBVWR87GYAN769
02-27	Inventory template re-sent (new format)	HubSpot email
04-20	Re-alignment call — Juan: contabilidad being re-ordered first; Tesote to run standalone before Odoo integration; Ricardo Marin = project lead	Fireflies 01KPGKVS432NSAV2VJSB2M6J21
04-23	ROI & proposal, 31 min — \$5k + \$2.5k/mo. Client priorities: auto availability + normalization only , conciliation later. Meeting note: "enfaticando la importancia de ofrecer un paquete completo desde el principio"	Fireflies 01KPRPV2Y5RJ59N2GDFAP16JJC
04-28	Closed lost	CRM

What actually happened

- 4.5 months of nurture, proposal sent into an org **mid-ERP-migration with its accounting department in reorganization** (their own description on 04-20). January's "aprobó avanzar" was approval to keep talking, not budget.
- On 04-23 the client explicitly scoped down (availability + normalization now, conciliation later) — and the proposal stayed **full package** as a deliberate stance. The junta's budget answer came back in 5 days: no.
- 4 contacts mapped (Brito → Sequera → Marin → Muñoz); multi-threaded at operator level, but the budget decision again happened in a junta without us.

Coverage

Best-documented deal in the set (5 recordings + 2 emails). The only gap is the junta itself.

Could-have-dones

1. Match the proposal to their stated phase-1 scope (\$1–1.5k/mo starter); land, then expand when the Odoo migration stabilizes.
2. Timing discipline: a company reorganizing its accounting won't sign a \$30k/yr commitment — propose the pilot during chaos, the full package after.
3. Concrete re-entry: their Odoo go-live is a knowable date; calendar the win-back to it rather than "a few months."

Alimentos Kiri

\$5,000/mo · Lost 2026-04-27 · Competitor: ENIAC Scope: 10 companies, 135 accounts, 50,000 tx/mo, SAP integration. ROI pitched: 2.37x, payback 5 months. **CRM loss reason:** "They went with a competitor (not much detail)" — **the detail is below.**

Timeline

Date	Touch	Source
02-12	Discovery, 40 min — Francisco Doria. SAP bidirectional integration is the core need	Fireflies 01KGSKVCJXV8ZBEATHEBQ95R5W
~Feb–Mar	Proposal v1 — selective scope (subset of companies/accounts)	referenced in 04-06 call
03-25	Commercial discussion, 104 min	Fireflies 01KM63V700H890E5KYPTCFW4WG  transcript partially mixes in an internal Tesote conversation — recording apparently kept running
04-06	Final call (Esteban + Roberto / Francisco + Leonardo Urdaneta, tech). Proposal v2 = full group. Lost 04-27, 3 weeks later	Fireflies 01KN2R6PB0D85RCNKTFKMEMQJN

Competitor intelligence (from the 04-06 transcript)

- Francisco, verbatim: "*¿la propuesta es prácticamente el doble de la primera que estábamos evaluando?*" — Esteban/Roberto justified the 2x with: data-integrity layer, consultative arm, token automation (formerly \$1,500/integration, now bundled), full-group scope.
- Francisco, on alternatives: "*estamos evaluando el otro proveedor... **Ellos se llaman ENIAC***" — Roberto: "*ENIAC, sí. Una empresa venezolana.*" They had been evaluating ENIAC "*hace tiempo*" — this was a long-running parallel eval, not a late entrant.
- Decision frame Francisco stated: roadmap with Leonardo (tech) that week, weighing "*la rentabilidad del proyecto.*" SAP integration with Tesote = **client does it themselves with API docs** — a plausible ENIAC wedge if they offered to build it.
- We asked the right question (Roberto got the name) but the record shows **no counter-move**: no revised pricing, no phased option, no reference calls arranged, no exec touch in the 3 weeks before the loss.

What actually happened

Tesote doubled the price mid-eval (repackaging) while the client was actively comparing against a cheaper local provider, then waited. ENIAC won on price/rentabilidad against a proposal whose ROI math (2.37x) evidently didn't survive the comparison.

Coverage

Solid. Best competitor intel in the set. Gap: proposal v1 economics (price not in record) and the 04-06→04-27 window.

Actions

- ENIAC intel file** — who they are, pricing model, SAP story. This name will come back.

2. **Win-back trigger:** check in with Francisco ~Q3 2026 — if ENIAC's implementation stumbles (data integrity is exactly where a cheaper provider breaks), the door reopens. We left on good terms.
3. When a prospect names a competitor + calls the price 2x, that's a fork: counter within days or concede. Three silent weeks = concede.

Salomé Makeup

\$1,500/mo · Lost 2026-04-23 · "Timing" Proposal: \$18,000/yr + \$4,000 impl (sent 2026-02-11) **CRM loss reason:** Timing — "opening new locations, prioritizing that; speak again in a month"

Timeline

Date	Touch	Source
12-16	Deal created — Doris Alejandra Hernandez (asalomemakeup@gmail.com), sole contact	CRM
01-26	Intake sheet email	HubSpot email
02-11	Proposal email: \$18k/yr + \$4k impl	HubSpot email
02-13	Moved to Negotiation	CRM
02-13 → 04-23	No logged touches	gap
04-23	Closed lost	CRM

What actually happened

- **Zero Fireflies recordings** — the entire relationship ran on unrecorded calls/WhatsApp. This post-mortem is the most speculative of the set.
- What the record does support: a **\$22k year-one ask to a single-contact retail SMB on a gmail address**. When Doris had to choose where capital goes, new store openings beat treasury software — rationally.
- "Negotiation" stage for 10 weeks with no logged activity suggests the stage was aspirational, not real.

Coverage

Partial/speculative. Two emails + CRM only. If WhatsApp history exists, it's the real record.

Could-have-dones

1. ICP question more than execution question: should a single-threaded retail SMB get an \$18k/yr proposal at all, or is this a future self-serve/lighter-tier customer?
 2. If pursued: anchor against her actual alternative (an admin doing it manually) and price the entry accordingly.
 3. "After the openings finish" is a calendar event — schedule the re-touch; new stores = more accounts = stronger Tesote case later.
-

MAPLOCA

\$1,500/mo · Lost 2026-04-22 · "Prefer hiring people" Proposal: \$18,000/yr + \$5,000 impl (sent 2026-04-17). 16-day deal cycle. **CRM loss reason:** Budget — "They prefer to hire more people rather than invest entirely in a solution like Tesote."

Timeline

Date	Touch	Source
04-06	Deal created — Carlos Martinez (finanza0101@), Adriano Sanchez	CRM
04-08	First call, 41 min — 24 sucursales, transaction growth bottlenecks; ~\$15k/yr cost frame floated	Fireflies 01KNHSCXPAAHSEJVV1Z98XEYX79
04-15	Discovery, 53 min — Tesote growth story (20→150 clients), no concentrator accounts, ERP integration	Fireflies 01KP9AQ612A2K4ZSA77NPK4WF4
04-17	Proposal call (STAR ROI analysis) + email: \$18k/yr + \$5k impl . Adriano to present to junta directiva Monday 04-20 ; answer promised in 1–2 weeks	Fireflies 01KP9HX7ABTE8YZ0P7BSYM0ARM + HubSpot email
04-22	Closed lost — junta chose headcount	CRM

What actually happened

- Execution was actually *fast and clean* — 3 meetings, proposal, junta date, decision in 16 days. The loss is **positioning, not process**.
- The junta did the obvious VE math: \$23k year-one vs. one more finance clerk (a fraction of that, fully loaded). When the pitch is "save manual hours," the competing line item isn't software — it's **cheap local labor**. Time-saved ROI loses that comparison almost by definition.
- The junta presentation was carried by Adriano alone with a demo + docs. We never spoke to the people doing the headcount math.

Coverage

Solid — all three meetings recorded, proposal email on record. The junta room is the only (decisive) gap.

Could-have-dones

1. Re-frame ROI against headcount explicitly: a hire doesn't give real-time consolidated availability across 24 sucursales, doesn't scale, adds error/fraud surface. That argument exists — it wasn't the one in the STAR analysis (time-saved).
 2. Offer to present to the junta directly (or a Luis/Roberto cameo) instead of arming the champion and hoping.
 3. A starter tier matching the "one clerk" price point would have changed the comparison entirely.
-

Maxipet

\$2,500/mo · Lost 2026-04-20 · "Budget" — re-engagement due NOW CRM loss reason: "Right now, they feel that's too much to pay. **We'll revisit this in June.**" → It is June.

Timeline

Date	Touch	Source
12-12	Intro, 35 min — Olga Moniz, 14 sucursales, multiple razones sociales. Cost frame floated: \$8,000–\$40,000/yr	Fireflies 01KC255KVQHXE3ESY23QS0N4BA
12-12	Recap email (pain points, client list)	HubSpot email
01-28	Deep dive, 72 min — Toni Marquez + Sonia Gamboa join. \$3–5k impl + \$12k/yr discussed; NDA offered	Fireflies 01KFHVNATYGFE20J3748PZRX9W
02-10	Technical session, 67 min — Sonia; conciliation processes, bank-commissions analysis (real consultative value delivered)	Fireflies 01KH424WDVYX0RW57H57S2NRAS
02-10 → 04-20	No logged touches (10 weeks)	gap
04-20	Closed lost — "too much to pay, revisit in June"	CRM

What actually happened

- The price anchor moved three times across three calls: **\$8–40k/yr → \$12k/yr → \$2.5k/mo (\$30k/yr) at close**. A family business (all gmail addresses) deciding between Olga and her socia can't underwrite a number that keeps changing — "too much to pay" is partly "I can't pin down what this costs."
- 175 minutes of recorded engagement incl. genuinely valuable consulting (bank-commission negotiation analysis) — real interest, real pain. Then 10 silent weeks. The deal didn't get rejected so much as expire.
- No proposal email on record — if a formal proposal was sent, it went via an unlogged channel.

Coverage

Solid on meetings (3 recordings); dark Feb→Apr. Decision dynamics between Olga and her socia invisible.

Action — re-engage this month

They named June. Concrete hook: the 02-10 bank-commissions analysis ("here's what we found you're overpaying the banks — that alone covers part of the subscription"). One number, one tier, one page.

Could-have-dones

1. One price, early, in writing. The \$8–40k spread in call 1 planted the "expensive and vague" seed.
2. Don't let a hot deal sit 10 weeks post-technical-session without a forcing event (proposal deadline, pilot start date).
3. Anchor vs. their manual-admin cost (same headcount logic as MAPLOCA).
